Khairy Mohd

Experienced Software Engineer | Database Migration Specialist |
Cloud Certified | Analytics Expert
Austin, Texas, United States

Summary

With over 8 years of extensive experience in software engineering, I am a seasoned professional specializing in database migration, ETL processes, and cloud computing. Throughout my career, I have demonstrated a strong command of programming languages, including C#, Java, Python, and R, consistently delivering robust solutions that drive efficiency and scalability across various industries.

My track record includes successfully leading complex projects and enhancing system performance at scale, leveraging my expertise in full-stack development, API troubleshooting, and automation tool development. Additionally, I hold certifications in leading cloud platforms such as Azure, AWS, and Google Cloud, underscoring my dedication to staying at the forefront of technological advancements. I excel in implementing data governance and stewardship practices, ensuring data integrity and accessibility while utilizing advanced analytics techniques to deliver actionable insights. Highly adaptable and results-oriented, I thrive in dynamic environments where I can apply my extensive experience and analytical skills to drive impactful outcomes and contribute to organizational success.

Experience

IBM

Back End Engineer
March 2025 - Present (10 months)
Austin, Texas, United States

General Motors

Software Engineer
June 2021 - March 2025 (3 years 10 months)
Austin, Texas, United States

Develop and maintain robust software solutions for the automotive industry, focusing on database migration, ETL processes, and application development.

Leverage expertise in C#, Java, Python, and various database technologies to enhance asset management and manufacturing processes. Assist developers with API troubleshooting and optimization, ensuring seamless integration and functionality. Contribute to the migration of terabytes of data from Oracle to PostgreSQL, improving data management and accessibility. Design and implement automation tools to streamline internal operations, increasing overall efficiency.

- Migrated enterprise master data from Oracle SQL databases to PostgreSQL, enhancing system performance and scalability.
- Achieved certifications in Azure Cloud, AWS, and Google Cloud Platform, demonstrating commitment to continuous learning and expertise in cloud services.
- Developed and optimized data orchestration tools, automating internal processes and reducing manual intervention.
- Created and sustained internal applications, providing reliable tools for engineers and business teams at General Motors.
- Customized executive reporting solutions using SQL, Oracle, Power BI, and Tableau, delivering actionable insights across multiple departments.

Texas A&M University System

Graduate Assistant of Institutional Research (Data Engineering)

June 2019 - June 2021 (2 years 1 month)

Commerce, Texas

Developed and maintained institutional databases, ensuring data integrity and accessibility for academic and administrative use. Applied advanced analytics techniques, utilizing Oracle SQL, WebFocus Query Language, R Programming, and SPSS to provide actionable insights. Contributed to the university-wide implementation of Data Governance, promoting standardized practices and data stewardship. Coordinated with multiple departments to transition from manual to automated report generation, streamlining processes and enhancing data utilization.

- Conducted comprehensive data analysis and mining, identifying trends and patterns to inform university strategies.
- Led the creation of customized reports, significantly reducing turnaround time and increasing departmental efficiency.
- Presented research on student career outcomes at a major research symposium, highlighting the impact of academic programs.
- Played a key role in the university-wide Data Governance initiative, establishing guidelines and protocols for data management.

- Managed and maintained critical institutional databases, supporting the university's research and educational objectives.

MD Revolution

Data Engineer / BI Developer

May 2017 - June 2021 (4 years 2 months)

San Diego, California

Developed and implemented advanced software design and development strategies to automate key processes within the Health Care industry. Ensured the integrity and availability of database and Tableau servers by providing meticulous administration and maintenance. Contributed to design and code reviews, upholding software engineering best practices and secure coding principles throughout the development lifecycle. Enhanced systems analysis and design methodologies to efficiently complete assigned tasks. Extended expertise in R Programming, Python, ETL, Tableau Desktop, Tableau Server, Minitab, PostgreSQL, and HL7 to optimize departmental operations.

- Streamlined report generation, producing precise operational performance reports for all departments using Tableau.
- Engineered algorithms to automate the updating of thousands of patient records, significantly saving work hours and reducing errors.
- Innovated monthly report distribution by integrating Tableau with R/Python, facilitating timely insights for decision-making.
- Employed statistical analytics to improve patient care and forecast retention rates, contributing to enhanced healthcare delivery.
- Developed data processing methods/ETL and automations with R and Python, significantly improving the accuracy of client and internal-facing reports of professional data visualizations in Tableau.
- Utilized statistical analytics to analyze patient data, improving patient care and predicting patient retention, providing annual reports for hospitals with large patient populations.
- Led internal report creation using Tableau and Tableau Server for day-to-day operational performance tracking across different departments.
- Developed algorithms to automate Tableau Server report distribution using R, handling the downloading and uploading of existing reports with customization for specific clients.

UC San Diego Health

Intern at Infection Prevention / Clinical Epidemiology

July 2016 - May 2017 (11 months)

San Diego, California

Provided comprehensive data analysis and entry support to the UCSD Health Medical Center, focusing on infection prevention and clinical epidemiology. Enhanced clinical workflow through the development of innovative programs, contributing to the efficiency of clinical staff. Analyzed compliance data for hand hygiene and personal protection equipment use, supporting initiatives to minimize infection rates. Collaborated effectively with peers and senior management, fostering strong professional relationships.

- Developed a program that significantly improved clinical workflow, enhancing overall efficiency of the clinical staff.
- Played a pivotal role in the Infection Prevention initiative, contributing to a safer environment within the UCSD Health Medical Centers.
- Analyzed and reported on hand hygiene and PPE compliance, providing actionable insights for infection control strategies

Education

Texas A&M University

Master's degree, Computer Science · (2019 - 2021)

California State University-East Bay

Master's Degree, Computational Statistics · (2014 - 2016)

California State University-East Bay

Bachelor's Degree, Statistical Economics and Statistics · (2012 - 2014)
